The SCBD Biodiversity for Development Initiative

CBD – Framework for poverty reduction and Development beyond 2010

A proposal presented for the symposium:
LINKING BIODIVERSITY
CONSERVATION AND
POVERTY REDUCTION: WHAT, WHY AND HOW?
London

April 2010 - Montreal

Convention on Biological Diversity

Outline:

- 1. Mainstreaming approach
- 2. The CBD-Planning cycle
- 3. CBD linkages to development and poverty reduction
- 4. The way forward with capacity development for behaviour change

1. Mainstreaming approach

We need a dialogue!

Between....

Development
Community

Environment Community

MEAs (CBD, UNFCCC, UNCCD, etc.) Environment Ministry, NGOs, environmental research institutes and universities WB, IMF, WTO, WHO,
Development
Cooperation agencies,
sector, planning and
finance ministries,
business-sector,
research institutes and
universities

1. Mainstreaming approach

A dialogue on what?

"Science/knowledge – policy – practice" interface

Modern, traditional and local knowledge

Sustainable
Development
Poverty Reduction
Human Well Being

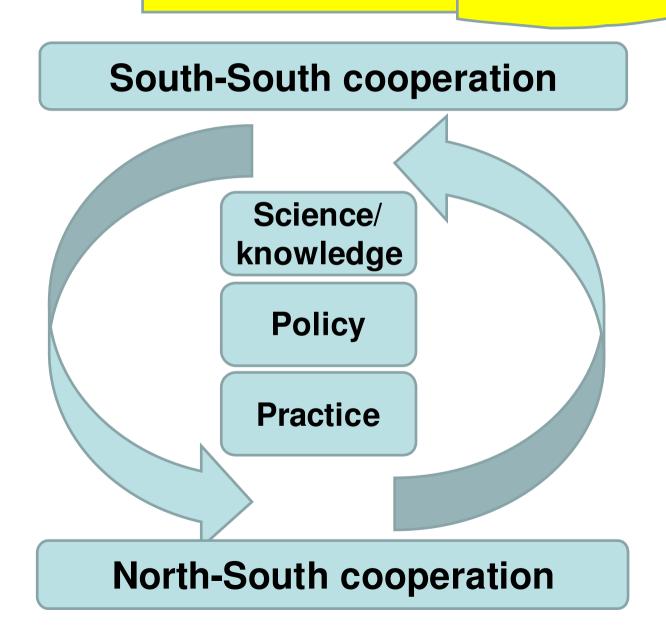

Management of Biodiversity, Ecosystems, EGS, on the ground

1. Mainstreaming approach How to structure the dialogue? At the national level B 0 P **Policy** D 0 Science/ **Practice** M knowledge W N

1. Mainstreaming approach

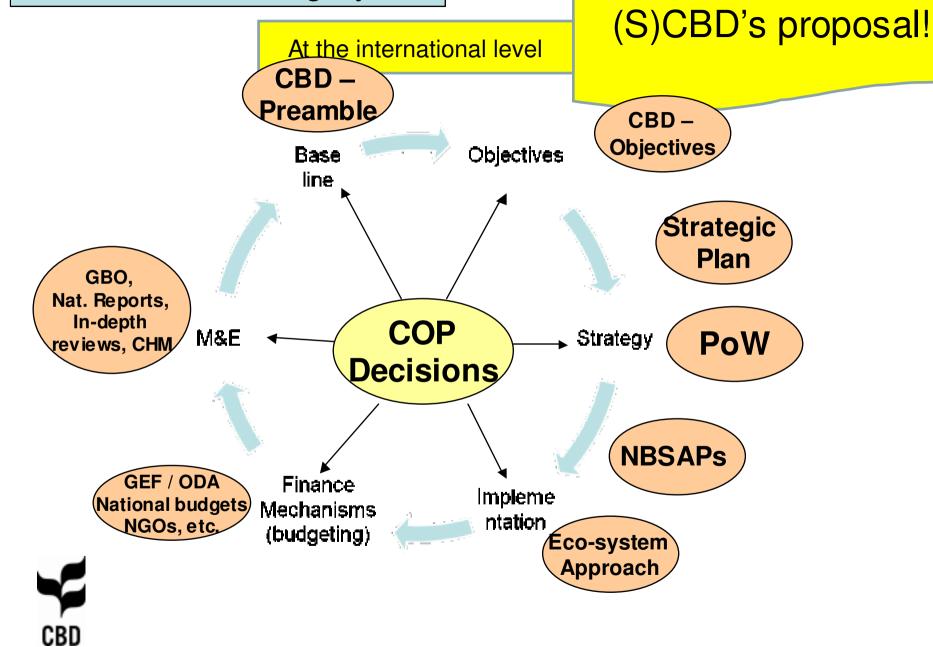

At the international level

How to structure the dialogue?

Let's see the proposals for a CBD – framework beyond 2010!

2. The CBD Planning Cycle

CBD-preamble

"The conservation of biodiversity is a common concern of humankind and an integral part of the development process" ...economic and social development and poverty eradication are the first and overriding priorities of developing countries...Conservation and sustainable use of biodiversity is of critical importance for meeting the food, health and other needs of the growing world population, to which purpose access to and sharing of both genetic resources and technologies are essential".

Article 6(b) of the CBD: calls for the integration of the conservation and sustainable use of biological diversity into relevant sectoral and cross-sectoral plans, programmes and policies.

CBD- Strategic Plan

Actual version resulting from review and consultations

- -Still reactive and based on a response model for environmental problems
- -exclusive for CBD
- -a conglomerate of 5 strategic goals and 20 targets poorly comprehensive, insufficiently coherent and difficult to measure

Desirable version of the SP

- -pro-active, relevant and attractive for sustainable development
- -inclusive and open for other MEAs
- 2 strategic goals and 9 targets: means for behaviour change and enhancing implementation = desirable behaviour of key actors = desirable impacts on biodiversity n <u>and</u> development/ poverty reduction

CBD- Strategic Plan

Actual version resulting from review and consultations

-Parallel indicators for poverty reduction and development

-Don't consider the PoW as supporting mechanisms to the SP

Desirable version of the SP

-Adoption of existing and internationally agreed indicators (e.g MDGs), describing how CBD wants to contribute to them and what's the added value.

-Thematic and cross-cutting PoWs should be biome-specific, land-use specific and eco-region-specific instruments to enhance implementation of the SP

Desirable version of the SP

Impact/outcomes on Biodiversity and development

Desirable behaviour

Means for Behaviour change

Mission Indicators (2050)

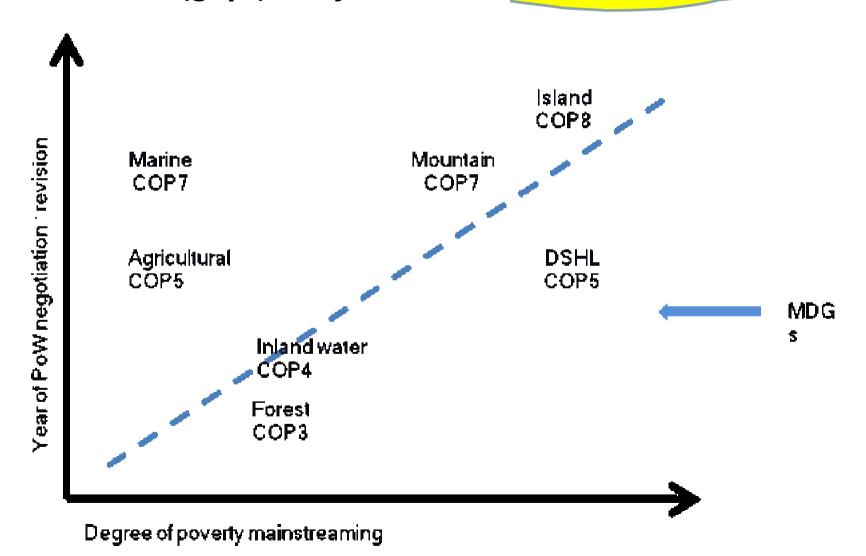

- Classic Biodiversity Indicators to measure the state of biodiversity
- selected MDGs, HDI and other globally concerted indicators

Strategic Goal A: Governments and stakeholders at all levels.....

- -Implement positive incentives (**Target 1**), increase EGS-use efficiency and wasterecycling (**Target 2**), improve ecosystem resilience, reduce environmental degradation, impoverishment, and unsustainable practices (**Target 3**)
- •<u>Strategic Goal B.</u> awareness raising, capacity development on strategic environmental assessment, knowledge management, environmental governance, finance management, adaptive planning and management

Results of a (gap-)analysis

CBD- Thematic Programmes of Work

CBD- Thematic Programmes of Work

Desirable PoW - Structure

Devlopment/Poverty CBD- Programme of work	Internationally recognized definitions (MDGs, Livelihood, HDI, WB-approach, OECD-DAC guidelines, human rights approach, MA – on human well-being)	Indicators to link the PoW to Poverty reduction and human well-being
1.Base Line approach (COP-Decisions)	- COP-Decisions and socio-economic base line data regarding human well-beeing and poverty reduction need to be incoporated	
2. System of Goals	- Goals, targets, objectives and targeting of population segments for human-well-being and/or poverty reduction need to be formulated	Existing indicators to which the PoW will contribute need to be selected
3. Strategy / Action plan (Operational Plan)	- Strategies and actions addressing human well being, development and poverty reduction need to be discribed	Timeframe, Milestones, Performance indicators
4. Evaluation / in-depth reviews	- Impact evaluation and performance monitoring of the PoW regarding poverty and human well-being has to be incorporated in in depth-reviews	
5. Lessons learned / Case Studies / Evidences	- Lessons learned regarding human well-being and poverty documented and ilustrated with case studies need to lead to adaptive planning and adptation of the Programme of Work	

NBSAPs

Actual situation!

2002, (Lessons learned after 10 Years)

COP VI - <u>Hague Ministerial Declaration</u>: ...the objectives of the Convention would be impossible to meet until consideration of biodiversity was fully integrated into other sectors.

2008 (Situation in COP IX)

COP: "Notes with concern, the inadequate mainstreaming of biodiversity, in particular in sectoral planning processes and in national development and poverty eradication strategies, and the paucity of information in relation to the implementation of national biodiversity strategies and action plans".

2009/2010: (Actual situation) From 85 assed 4th National Reports:

- 70 Parties reported "Lack of mainstreaming/ Fragmented decision making /communication/coordination"
- 51 Parties reported "Lack of economic valuation studies/information"
- BUT, 70 Parties reported "recognition that biodiversity is linked to human wellbeing"

NBSAPs

Desired situation!

NBSAPs need to become a mainstreaming instruments among other MEA-plans

Country Parties need an unique environmental strategy for mainstreaming and to respond coherently to all the MEAs

Country Parties and the SCBD need to pay more attention to sub-national and regional environmental strategies

Country Parties are free to adopt the proper planning instruments or approaches, that best fits

BSAPs would be successful, if they are internalized and integral parts of the national, sub-national or regional planning cycles

Enabling Implementation

We need Partnerships for capacity development processes on mainstreaming biodiversity and ecosystem services covering all the countries and addressing the following **target groups**:

- a) Policy-makers from various government sectors and departments
- b) Practitioners from relevant public, private and business sector, local communities and indigenous organizations
- c) Scientists and researchers from different disciplines

- a) The environment community needs to do its home work!
 - Integrating the development dimension into our planning cycle and working approaches
 - Generating integration and synergies between the Multilateral Environmental Agreements
 - Being attractive, comprehensive and useful for the development community

b) We need to structure a dialogue with the development community!

Addressing the so called development community and identifying the needs of specific target groups at all levels

At the global level

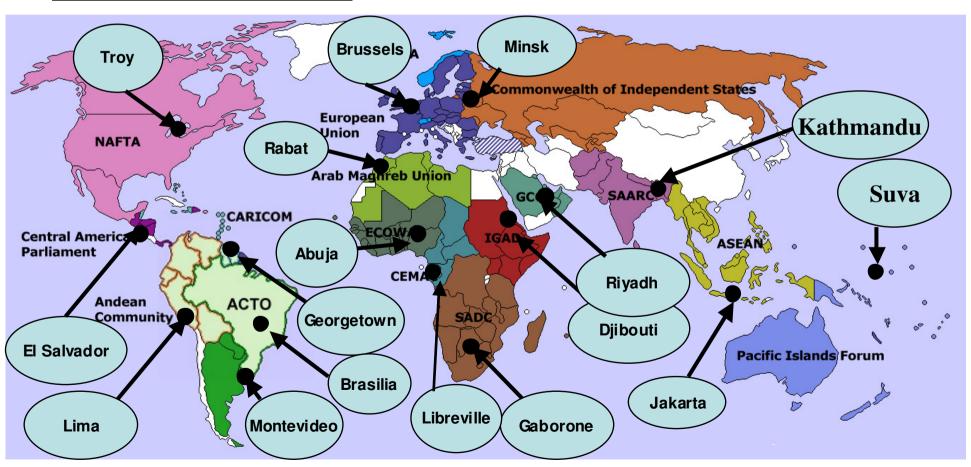

Word Bank, IMF, WTO, WHO, various UNorganisations, Bi- and multilateral Cooperation agencies, private companies, Development and Private Banks, research institutes and universities

At the national and regional level

- 1) Policy-makers from various government sectors and departments
- 2) Practitioners from relevant public, private and business sector, local communities
- 3) Scientists and researchers from different disciplines

- c) We need develop sound competencies and generate behaviour changes through awareness raising and capacity development on mainstreaming for
- A better systemic recognition of the fundamental interrelations and interdependences between biodiversity, ecosystem services, the economy, culture, and human well-being,.
- A more effective environmental governance approach
- A more integrative and adaptive environmental planning approach
- A more effective environmental finance management based on national and external finance sources;
- A more effective transfer, adaptation and generation of environmental technologies and innovations on the ground

d) We need to support the CBD-implementation process through triangle cooperation around regional nodes covering and interconecting the different levels and regions worldwide!

Thank you for your attention
